

CONCRETE CASTING MODULE (CCM)

The CCM 100, CCM150 and CCM200 casting modules are designed to be embedded in a concrete wall (for onshore projects). When embedded, they create a round, watertight sealed opening that can later be used for installing a conduit with cables or pipes. The module is designed for conduits with diameters of 150mm and 200mm. As long as the casting module is not in use, a round hole is created in the wall, sealed with a thin plastic wall to keep it watertight. Depending on the thickness of the wall, the CCM can be extended with a standard PVC pipe, which needs to be cut to size, ensuring a uniform round hole through the entire depth of the wall once the concrete is poured.

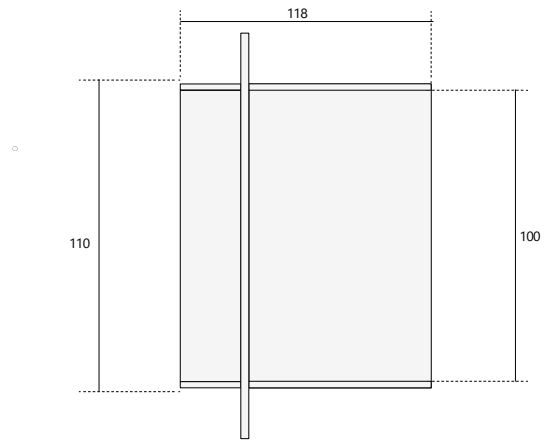

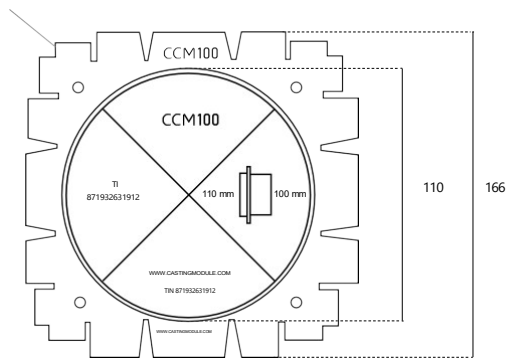

Advantages of the CCM150/CCM200

- Waterproof seal
- Especially designed to fit in round transits like the RGP150 from MCT Brattberg
- The modules can be interconnected (butterfly cutouts)
- Easy mounting prior to pouring concrete wall (attach module to concrete reinforcement with e.g. tie-wraps)

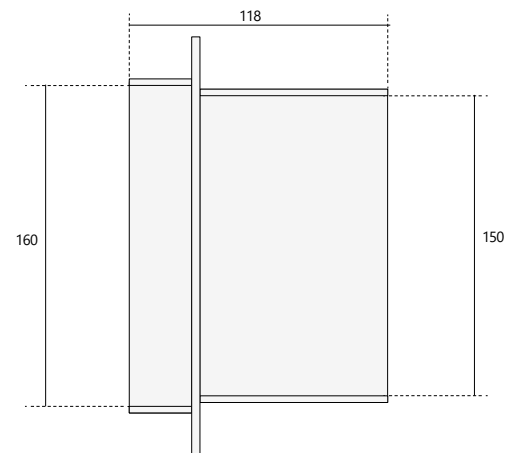

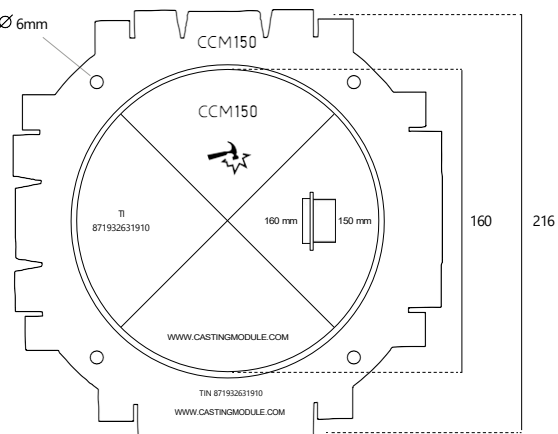

CCM 100

Ø 6mm

CCM 150
